Expositor

Trung Pham

Fecha

Miércoles, 07 de Junio de 2017

Tiempo

12:00 PM – 12:30 PM

Lugar

Salón Ejecutivo

El **Centro de Investigación en Economía Aplicada** en conjunto con el **Magister en Economía** de la Universidad de Talca, invitan cordialmente a los interesados en participar del próximo **Brown Bag Seminar**, donde el Dr. Trung Pham presentará su propuesta de investigación:

Analysis of Data through Data Mining

Data mining is the discipline of extracting information, in the automatic manner, from a set of data. In this process, clusters (subsets) of data with similar characteristics must be identified, and the characteristics of each subset is extracted. This presentation will summarize the traditional process of clustering, and new techniques of clustering data into subsets so that the results will reflect better accuracy necessary for the extraction of the characteristics. Numerical results are given in various examples (studying student at risk, correlation between class attendance and grades, processing images, identifying motion, detection of fire)
